

Source File: ~/1337/25/lab25.(C|CPP|cpp|c++|cc|cxx|cp)

Input: Under control of `main` function

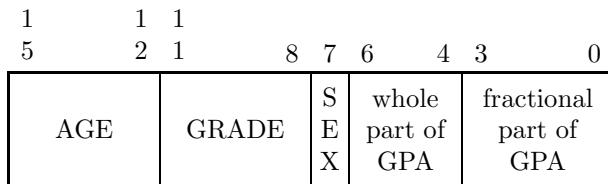

Output: Under control of `main` function

Value: 2

Write a function to compress its input parameters. The prototype is given by

```
unsigned int compress(unsigned int age, unsigned int grade, char sex, double GPA);
```

The input parameters consist of a child's age (from 3 through 18), grade in school (from 0 through 12), sex (either 'M' or 'F'), and grade point average (a number from 0.0 [all F's] through 4.0 [all A's]). You may assume that the GPA has exactly one digit after the decimal point. Your function should store the input parameters into the low-order 16 bits of an `unsigned int`, which is then returned to the calling program. The input parameters should be compressed according to the following diagram:

A sex of 'M' should be stored as one (1), and a sex of 'F' should be stored as zero (0).

A sample `main` function for testing your function is shown in Figure 1 and a sample execution sequence is shown in Figure 2. To use the `Makefile` as distributed in class, add a target of `lab25` to `targets2srcfiles`.

```

1 #include <iostream>
2 #include <cstdlib>
3 #include <iomanip>
4 #include <bitset>
5 #include <climits>
6
7 using namespace std;
8
9 // printLine: prints a horizontal line of length hyphens to output
10 // stream os
11 void printLine(int length, ostream& os);
12
13 // compress: compresses age, grade, sex, and GPA into the lower 16
14 // bits of an unsigned int
15 unsigned int compress(unsigned int age, unsigned int grade, char sex, double GPA);
16
17 const int N = sizeof(int) * CHAR_BIT; // # of bits in an int
18
19 int main()
20 {
21     unsigned int age, grade, compressed;
22     char sex;
23     double GPA;
24 }
```

Figure 1. /usr/local/1337/src/lab25main.C (Part 1 of 2)

```
25 // Prepare for floating-point output format; show one digit after the
26 // decimal point
27 cout << fixed << showpoint << setprecision(1);
28
29 printLine(78, cout);
30 cout << setw(76) << "332222222221111111110000000000" << endl;
31 cout << "    Age      Grade      Sex      GPA      Compress      "
32     << "10987654321098765432109876543210" << endl;
33 printLine(78, cout);
34
35 while (cin >> age >> grade >> sex >> GPA)
36 {
37     compressed = compress(age, grade, sex, GPA);
38     cout << setw(5) << age << setw(8) << grade << setw(7) << sex
39         << setw(8) << GPA << setw(11) << compressed << setw(5) << " "
40         << bitset<N>(compressed) << endl;
41 }
42
43 printLine(78, cout);
44
45 return EXIT_SUCCESS;
46 }
47
48 void printLine(int length, ostream& os)
49 {
50     char ch = os.fill();
51     os << setfill('-') << setw(length) << "-" << setfill(ch) << endl;
52 }
```
