

**Source File:** ~/1337/32/lab32.(C|CPP|cpp|c++|cc|cxx|cp)

**Input:** Under control of `main` function

**Output:** Under control of `main` function

**Value:** 1

The purpose of this assignment is to write two different versions of the same function. The description and prototype of each of the functions can be found in the `main` function shown in Figure 1. A sample execution sequence is shown in Figure 2. To use the `Makefile` as distributed in class, add a target of `lab32` to `targets2srcfiles`.

```
1 #include <iostream>
2
3 using namespace std;
4
5 // Function larger receives two value parameters, a and b, and returns
6 // the larger of the two.
7 int larger(int a, int b);
8
9 // Function larger has two parameters, each a pointer to a const int.
10 // The function returns the larger of the two int values.
11 int larger(const int *a, const int *b);
12
13 int main()
14 {
15     int a, b;
16
17     while (cin >> a >> b)
18     {
19         cout << "The larger of " << a << " and " << b << " is "
20             << larger(a, b) << endl;
21
22         cout << "The larger of " << a << " and " << b << " is "
23             << larger(&a, &b) << endl << endl;
24     }
25
26     return 0;
27 }
```
