Write a program that reads from standard input character-by-character and determines the number of words in the input. A word is defined as a sequence of characters that begins a line or is preceded by whitespace and that is terminated by whitespace. The input is of unknown length; however, input can terminate when the end-of-data marker is encountered.

A sample execution sequence is shown in Figure 1. To use the `Makefile` as distributed in class, add a target of `lab44` to `targets1srcfile`.

18 This is a test of your word analysis program.
19 How many words did you find that begin with a vowel?
20 WHAT ABOUT STARTING WITH AN S OR ENDING IN AN s?
