Input: Standard Input
Output: Standard Output
Value: 2

In mathematics, the **Fibonacci numbers**, commonly denoted F_n , form a sequence, called the **Fibonacci sequence**, such that each number is the sum of the two preceding ones, starting from 0 and 1. That is,

$$F_0 = 0, F_1 = 1,$$

and

$$F_n = F_{n-1} + F_{n-2}$$

for $n > 1$. The sequence starts

$$0, 1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89, 144, \dots$$

Write an assembly language program that will read an integer for n from standard input. Use a loop to determine F_0 through F_n using the above description. The format of the output is shown below.

Commands to assemble, link, and run your program are shown in Figure 1.
